

Fermenters and bioreactors for research through production

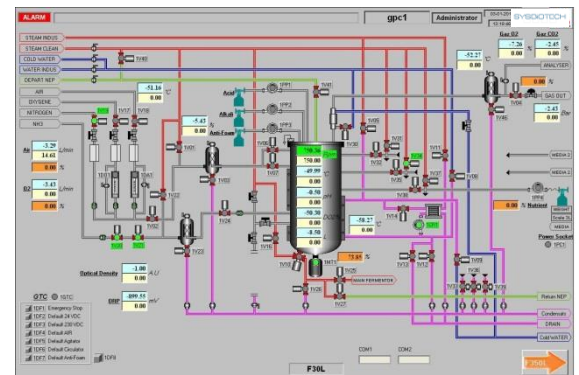

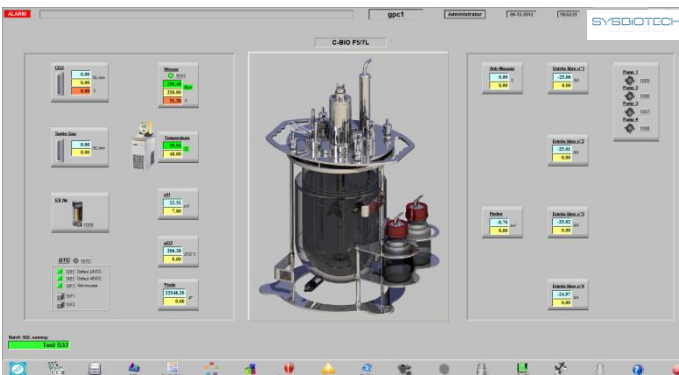

Presentation

Sysbiotech Company is one of the leading corporations of scientific, laboratory and industrial equipment. We offer a large range of equipment in the biotechnology field such as fermenters and bioreactors. These equipment find wide application in research centers, laboratories, scientific institutions, colleges, food processing plants, manufacturing and pharmaceutical industries.

Sysbiotech provides great expertise and customer support with several production facilities in the world. This allows us to be responsive and even closer to our customers to be able to customize and configure our products in accordance with their needs. A full range of equipment and consumables respond to all the stages of your storage process. All of our products are customized and configured to suit your needs.

Our skills

- A **flexible and adaptable approach** **bespoke** equipment
- Advanced technical expertise of customer needs
- A **complete automation** of the process
- Software features **simplified and adjusted** to the client process

□ Fermenters and Bioreactors

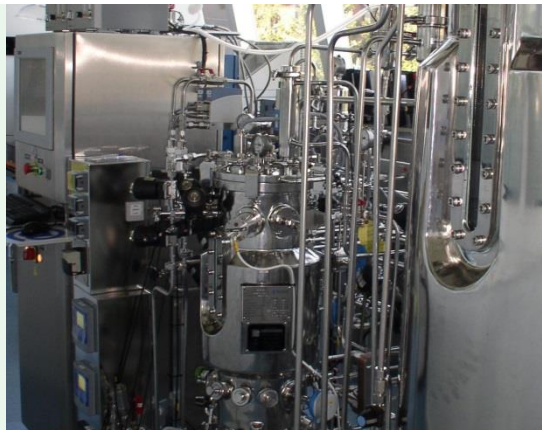

Lab-Scale from 250 mL to 10L

We propose a range of bioreactor for cell and bacterial cultures designed to achieve scale-up for research and development of biotechnological process. Offering a wide range of technical solutions to meet all expectations of fermentation process

Pilot from 10L to 600L

To answer all type of micro-organisms cultivation and cell culture. Sterilizable-in-place, the stainless steel bioreactor systems come in several volumes from 10L to 600L. A modular design and wide variety of standard and options give the flexibility to customize each bioreactors.

Industrial \geq 600L

Industrial scale fermentation & cell cultivation units, media & buffer preparation vessels, controls, **Sysbiotech** brings you a wide-ranging solution. Our expertise allows us to assist you for the creation of new manufacturing plant.
