## UV-VIS PDA DETECTOR

Is an analytical **Diode Array Detector** which allows measuring absorbance of eight **wavelengths simultaneously in one cell** just as measuring of whole spectrum (scan). This unit is used in liquid chromatography **to verify analyzed samples** by means of eight wavelengths or scanned spectra.

Noise level at 254 nm is  $\pm 5 \cdot 10^{-6}$  AU with a test cell.

High standard **deuterium lamp** in a special socket enables **easy exchange** from front panel.

**Output signal** is available in both **digital and analogue** form. Detector could be controlled by **Clarity** or **ECOMAC** software.

Cell could be easily removed from the front of the unit. Three selectable flow cells **AD02, AD05** and **AD10** with optical path length 2.4, 5 and 10 mm. AD05 cell is included as component of the detector. Other cells on request.

**The unit's DAD (diode array detector) design offers many advantages:**

- **continuous up to 100 Hz scan** or absorbance measuring **on eight wavelengths simultaneously**
- wavelength setting **from 200 up to 800 nm** in increments of 1nm
- lamp work hours are counted **using the built-in counter for both deuterium and halogen lamps**
- **the cell is easy to replace** from the side of the detector
- **Clarity PDA module support for 3D measurement**
- **unit is controlled by Ethernet or USB interface**
