Vessel Support Collar aids vessel loading

- Reactor-Ready uses an innovative support collar fitted to the neck of each vessel, which allows the vessels to be swapped in and out of the Reactor-Ready core like a cartridge.
- The stainless steel collar locks securely into the support plate on the framework and allows the vessel to remain supported, even when not clamped.
- Vessel exchange is tool free and can easily be undertaken by one person.

Unique Self aligning Stirrer Coupling saves time when changing Vessels

- Patented drop-in stirrer coupling engages easily without the need for tools.
- Simply lower the stirrer coupling to engage with the stirrer guide below.

Stainless Steel Vessel Support Collar

Choice of PTFE stirring shafts

- Reactor-Ready is offered with a choice of PTFE Stirring Shafts: Anchor, Retreat Curve and Turbine or Propeller styles.
- PTFE Anchor Stirring Shaft is included with all standard reaction vessel kits.
- PTFE Turbine Stirring Shaft is included with all process reaction vessel kits.

I-beam Support allows the Stirring Motor to be positioned with ease

- I-beam allows the stirrer drive to be raised or lowered without needing to remount the stirrer.

PTFE Retreat Curve Stirrer

PTFE Turbine or Propeller Stirrer

Whip-free stirrer guide

- The Reactor-Ready's PTFE stirrer guide screws directly on to the glass lid and features a unique extended support which provides whip-free agitation even at high speeds.
- The stirrer guide is chemically inert, gas tight and suitable for work under vacuum.

PTFE Stirrer Guide provides whip-free agitation

Quick Release PEEK Hose Couplings

- Operates over the temperature range -70°C to +230°C.
- Quick release, screwthread design allows rapid exchange of vessels without the use of tools.
- Simply tighten by hand for a leak tight seal.
- PEEK with Viton O-rings ensures all wetted parts are chemically resistant.
- Lightweight, metal free design prevents chipping and minimises strain on the glass fitting.
- All hoses have a 12mm ID, maximising thermofluid flow and heating/cooling performance.
- Low thermal conductivity of PEEK reduces frosting when cooling.

Hose Manifolds allow easy Thermofluid drain down

- The inlet and outlet hoses from the Reactor-Ready vessel connect to manifolds attached to the support rod. These manifolds serve two important functions:
 1. Supports the hose running from the vessel, thereby eliminating stress on the glass sidearm.
 2. Allows thermofluid drain down which provides a quick and clean method of removing the thermofluid from the vessel jacket when changing vessels.
- By opening the venting valve on the (upper) outlet manifold, thermofluid drains from the vessel back to the thermoregulator under gravity.
- Opening the drain tap on the (lower) inlet manifold allows drainage to an external reservoir.

Case Study: Accelerating process optimisation in a busy chemical development lab

Researchers at a leading US pharmaceutical company invested in Reactor-Ready for use in their chemical development lab. The process R&D group, specialising in small molecule research, are using Reactor-Ready for optimising new or existing chemistry, identifying and eliminating impurities, and screening process variables for transfer to kilo-labs, pilot plant and manufacturing sites.

Commenting on their existing methods the Lead Scientist said, "We use round bottom flasks, but temperature control via mantles or oil baths is poor. Alternatively, when we use traditional jacketed reactor vessels, we need a different set up for every scale change. Even changing a reactor of the same size takes ages."

"So I liked Reactor-Ready the minute I saw how easy it was to change reactors. Reactor-Ready does it all. I get one stand which fits all sizes up to 5 litres. I get overhead stirring on all scales. I get vacuum jacketed vessels, which provide excellent temperature control with minimum heat loss, which is a real advantage at low temperatures, and I get the ability to rapidly change out my reactors."

"The first time I changed vessels, it took about 5 minutes but now I can change in less than 2 minutes. That includes removing and attaching the heating fluid hoses. Occasionally I lose a drop or two of heat transfer fluid but most times I lose none. The thing I like about the system is the control and speed. I get better control of my reactions and I can vary my work or scale immediately".

Reactor-Ready in detail

It is the attention to detail and wealth of innovative features that makes Reactor-Ready so much better

Precision ground lid and vessel flanges combine with PTFE collar and FEP encapsulated O-ring to offer superior sealing performance.

Vessel clamp support allows easy vertical repositioning of the vessel whilst maintaining the stirrer coupling alignment.

Venting stopcock on the outlet manifold allows quick and easy draining of the thermofluid during vessel exchange.

Vessel-to-manifold hoses are supported by the manifolds and frame, eliminating stress on the vessel.

Quick release PEEK coupling allows rapid exchange of vessels without the use of tools. Operates over the temperature range -60°C to +190°C.

Thermofluid may be drained back to the thermoregulator or decanted via a fluid drain tap on the inlet manifold.

Heavy duty base plate with levelling feet ensures that the Reactor-Ready support stand is secure and stable.

Stirrer support I-beam allows the stirrer drive to be easily raised and lowered with ease.

Support system accepts all leading brands of overhead stirrer and allows easy, tool free adjustment.

Wide range of accessory glassware including condensers, dropping funnels, adapters, powder addition funnels, gas purge and liquid inlet adapters etc.

PTFE stirrer guide provides excellent stirring and sealing performance. An extended stirrer shaft support ensures whip-free agitation.

Reaction vessels are held by a novel quick-release clamp. No tools are required to exchange vessels.

Chemically resistant PTFE stirrers.

Accepts jacketed and vacuum jacketed vessels including 100ml, 250ml, 500ml, 1 litre, 2 litre and 5 litre.

Innovative triple support stand features heavy duty stainless steel support rods for maximum strength, stability and to minimise vibration.

Zero Dead Space Drain PTFE stopcock is designed to prevent leaking or weeping across the full temperature range (-70°C to +230°C). Large 15mm bore minimises sample hold-up and is ideal for slurries.

HDPE drip tray will catch any spills and can accommodate the contents of a 5 litre vessel and jacket.

Patented drop-in stirrer coupling engages easily without the need for tools.
