1. Defined as measurement uncertainty, or maximum wavelength error, using a coverage factor of 3 providing a confidence level of $\geq 99.7\%$.

2. Traceable to an NIST standard (SRM 2517a).

3. For a 10 minute measurement period given at three times the standard deviation (3σ).

4. Characteristic performance, but non-warranted.

5. Laser diode locked to acetylene absorption (NIST Special Publication 260-133).

6. Data in units of nm and cm⁻¹ are given as vacuum values.

7. Bandwidth is FWHM.

8. Dependent on frame rate of the photodetector array.

9. Measurement time using SCPI commands dependent on PC/network timing.
