1. Defined as measurement uncertainty, or maximum wavelength error, using a coverage factor of 3 providing a confidence level of $\geq 99.7\%$.

2. Traceable to an NIST standard (SRM 2517a).

3. For multi-wavelength measurement, $\geq 15 \text{ GHz}$ channel separation is required to achieve specified wavelength accuracy.

4. Characteristic performance, but non-warranted.

5. Data in units of nm and cm^{-1} are given as vacuum values.

6. For lines above -25 dBm, 0.1 nm noise bandwidth.

7. OSNR is reduced as the number of lines is increased.
