TQC SHEEN, DEVELOPERS AND MANUFACTURERS OF **PAINT TEST EQUIPMENT**

TQC Sheen designs and produces field measuring instruments and lab equipment for testing paint and coatings and general surface treatment.

Production facility
TQC Sheen's objective is to create and offer solutions for every possible QC-application in surface technology. TQC Sheen products are known for their ergonomic features and user friendliness. The production facility is located in The Netherlands. In order to complete the TQC Sheen range the company works closely together with renowned manufacturers from all over the world.

Global distribution
TQC Sheen has offices in the Netherlands, Germany, Italy, United Kingdom, Norway, Korea, China, Singapore and North America, and works closely together with a global network of distributors in more than 60 countries. The TQC Sheen product range focuses mainly on three different market sectors; Paint Research and Development Laboratories and Quality Control, Protective and Marine Coatings Applications, Surface Finishing Industry.

History and innovation
In October 2017 TQC BV. has acquired Sheen Instruments LTD. Sheen Instruments has a history of over 70 years being manufacturers of laboratory equipment for the paint industry. TQC is a manufacturer of paint test equipment renowned for their innovative approach and ground breaking developments.

Both companies are joining forces now and the two brands are being merged in the new TQC Sheen label. The new name represents the best of both worlds: Innovation & History.

TQC Sheen's production facility is located in The Netherlands

TQC Sheen has distributors in more than 60 countries

Decimal Mark
In this booklet we have striven to use the , as decimal mark for metric
values/SI units. Imperial values have a . as decimal mark, based on the US system.

TQC ThermoKinetics
The TQC Sheen ThermoKinetics range is a new range within the product line.
The TQC Sheen ThermoKinetics range focuses on the effect of temperature on paint
related chemistry.

Calibration certificate included

Ideal Finish Analysis Ready

CurveX 3 Standard Oven Logger
With Ideal Finish Analysis (Oem)

The CurveX 3 Standard offers easy-to-use, high quality temperature data logging for paint curing ovens.
Measurements, analysis levels and report options are fully customizable to provide you with tailor-made information on the quality of your curing processes. The data logger is fitted with a large full-colour touchscreen for easy menu-driven operation and quick display of measurement results. The logger has 6 channels and a memory of at least 8000 measuring points per channel.

Ideal Finish Analysis data analysis software allows you to analyze the logged data and create detailed reports. These advanced features, together with a wide range of display and printing options, makes CurveX 3 Standard the most flexible temperature data logging solution available, excellently suited for both field use and laboratory conditions.

⭐ Features

- Easy-to-use
- Large full-colour touchscreen
- Menu-driven operation
- High quality temperature data-logging
- Measurements, analysis levels and report options fully customizable

⚙ Technical Specifications CurveX 3

Channels:	6x thermocouple K type input
Measuring range :	-50 to 1200 °C, -58 to 2192 °F
Accuracy:	± 0.5 °C / 0.9 °F (static), ± 1 °C / 1.8 °F (dynamic)*
Resolution:	0.1 °C / 0.2 °F
Memory:	10 blocks with 25000, or 1 block with 250000 readings.
Interface:	USB-A data transfer to memory stick USB-B data transfer to TQC Sheen Ideal Finish Analysis and battery charging
Sample interval time:	1 to 3600 s
Languages:	English, French, Spanish, Italian, Dutch, Korean, Japanese
Display:	3.5 inch, 240 x 320 pixel, 262K colour TFT LCD with touch screen
Power supply :	Lithium Polymer rechargeable battery
Battery life:	continuous use 4 hours, standby or logging 11 hours
Dimensions (HxWxD):	108 x 90 x 35 mm / 4.3 x 3.5x1.4 in.
Weight:	425 g / 15 oz.
Material:	Aluminum housing with protective sleeve

*dynamic specifies the accuracy when running through an oven and the instrument heats up gradually.

⚙ Technical Specifications Ideal Finish Analysis Software

Supported Operating Systems:	Windows Vista, Windows 7, Windows 8 and Windows 10
Platform:	32b or 64b
Memory:	32MB
Required Hard Disk space:	128 MB

CurveX 3 Standard Oven Logger Kit
Profiling an industrial powder coating oven starts right here with the CurveX 3 Standard Oven Logger KIT. It contains all necessary items, just add the desired magnetic or clamp-type probes to make the oven logger KIT complete.

The heart of the KIT is the CurveX 3 Standard Oven datalogger which offers easy-to-use, high quality temperature data logging for paint curing ovens. Measurements, analysis levels and report options are fully customizable to provide you with tailor-made information on the quality of your curing processes. The data logger is fitted with a large full-colour touchscreen for easy menu-driven operation and quick display of measurement results. The logger has 6 channels and a total memory of 250000 measuring points.

Ideal Finish Analysis data analysis software allows you to analyze the logged data and create detailed reports. These advanced features, together with a wide range of display and printing options, makes CurveX 3 Standard the most flexible temperature data logging solution available, excellently suited for both field use and laboratory conditions.

CurveX 3 Basic Oven Logger Kit

Profiling an industrial powder coating oven starts right here with the CurveX 3 Basic oven logger KIT. It contains all necessary items, just add the desired magnetic or clamp-type probes to make the oven logger KIT complete. The CurveX 3 Basic oven data logger that offers easy-to-use, high quality temperature logging for industrial paint and powder coat cure ovens. The oven data tracker is fitted with three large buttons for easy operation and three LED giving power, paint type, logging and cure information.

The main component of the KIT is the CurveX 3 Basic an oven temperature data logger that allows the conditions in the oven to be monitored regularly for each substrate. The oven temperature data logger is placed in an insulated box and as it passes through the oven with the work piece and it can measure the temperature in several places on the surface of the product simultaneously. Several probes for measuring the ambient temperature and the temperature of the product can be connected to the data logger. These include magnet, clamp, ring-type and wire probes. In addition to the most common temperature probes, special infrared probes can also be used. The measurements are to a PC via the oven temperature data logger's USB port and analysed using the Ideal Finish software program.

The included Ideal Finish Analysis software allows you to analyse the logged temperature data and create detailed reports. Advanced oven profiling features like cure data analysis, ideal cure and tolerance bands, together with a wide range of display, report and printing options, make CurveX 3 Basic oven logger the most flexible temperature logging solution available.

Excellently suited for industrial oven and laboratory oven temperature profiling. Mandatory test in Qualicoat, QIB and GSB accredited laboratories.

⭐ Features

KIT configured to start oven temperature data logging in paint and powder coating curing oven applications, just add your probes to make it complete.

Insulation box with degassed silicone materials suitable for powder coating applications.

For absolutely silicone free or high temperature applications select your insulation box.

Document and prove process quality following Qualicoat, GSB, ISO9000, QIB etc. and create outstanding quality reports with the icluded advanced analysis software.

CurveX 3 USB Oven Logger with Ideal Finish Analysis Software, Factory calibrated, calibration certificate included, Ideal Finish Analysis License Key, USB cable, small protective case.

⭐ Features

- Operate through only 3 large buttons
- Meaningful feedback of multi coloured LED's
- Factory calibrated for immediate use
- Downloads data through a standard USB port
- Rechargeable battery pack through USB connector
- Large memory of max. 160.000 readings
- Memory for 10 different batches, automatically overwrites the oldest results
- Programmable "paint type" memory for immediate "pass / fail" result
- Flat design, only 16 mm, for use in low clearance ovens
- Compatible with Ideal Finish Analysis software

⚙ Technical Specifications CurveX 3 Basic Oven Logger Kit

Measuring range:	0°C to +500°C / -58°F to +932°F

Insulation Boxes For CurveX

CurveX insulation boxes are specifically designed to protect the CurveX loggers against the harsh environment in industrial ovens. **All** insulation boxes are made of a polished stainless steel outer box filled with micro porous insulation material to prevent the oven heat to penetrate the aluminium inner box. Inside the aluminium inner box a high density media heat sink collects any excess of heat and keeps the CurveX logger at an acceptable operating temperature for a long period of time. The heat sink thermo energy collecting capacity can be restored by cooling it down after use. This physical process is endless and does not require exchange of the heat sink after a certain period of time.

CX2002   CX2003

CX2004   CX2005
⭐ Features

Excellent logger protection against oven heat.

Ferro plate for holding the magnet probes when not in use.

Mounted cable hook allows the storage of surplus cable length.

Temperature Probes For CurveX

CurveX temperature probes are specifically designed to measure oven air temperature and the part surface temperature in an oven. All probes are made of premium grade thermo couple K wire, which guarantees the highest accuracy available. High class magnet and springs are used that do not disintegrate or lose force at high temperatures. The various probe types allow measuring on every part regardless of its shape or size.

⚙ Technical Specifications Temperature Probes for CurveX

Probe type:	Thermo couple K	Temp Range:	-40 to 375°C / -40 to 707°F
Connector:	K type miniature plug	Tolerance Value:	-40 ±1.5°C / -40 ±34.7°F
Material:	Nickel-Aluminium Nickel-Chromium	Temp Range:	375 to 1000°C / 707 to 1832°C
Accuracy:	Class I Premium grade	Tolerance Value:	±0.4% Reading / ±0.4% Reading

Probe Mounting: Magnet
Cable Type: Stainless steel braided lead
Cable Length: 5000 mm / 16.4 ft
Max Temp.: 480°C / 896°F

Case Study CurveX System

AGA Rangemaster is a leading international premium consumer which manufactures and distributes some of the best known and loved kitchen appliances and interiors furnishings in the world. Lately they experienced a problem with colour match on one of their enamels.

The Speedometer of the Oven
The CurveX system gives the necessary information on the activities inside the furnace. With the information gathered by the CurveX Datalogger combined with Ideal Finish Analysis software adjustments can be made and money saved.

"We have used it already 50 times to study and balance our furnace. We have before and after curves where we have adjusted a 20 degree difference between the top and bottom of our furnace to 6 degrees. but also evened out cure index and time at temperature, we have found the software very useful for comparing data. We made adjustment to the burners to change the flame lengths to overcome this problem."

Besides changing the temperature and time AGA Rangemaster found out that if the furnace was heavily loaded the temperature curve was affected. This problem was gone un-noticed until they used the CurveX system.

"We are now more self sufficient on setting the furnace burners and much better understanding of the things that can affect the furnace balance. Even to the point where we have calculated the Kg of enamel ware that the furnace can cope with from the Joules available in the gas input. We could reduce our track rate slightly to ensure we never had a net loss of energy imput to load but have at the moment not made a decision, as it is only under certain circumstance now that the load can exceed the gas."

Now the issue is resolved they will use the datalogger once a week to check the furnace is not drifting back to where they had a problem.

Ideal Finish Analysis Software

The TQC Sheen Ideal Finish Analysis Software is the most advanced coating climate, coating cure and coating thickness monitoring software package available today. With two user levels Ideal Finish Analysis offers user friendly reporting functions for standard production work as well as advanced calculations for in depth analysis of the climate parameters prior to coating, the curing process and oven performance during coating and the thickness after coating. Detailed graphic representations and customizable reports help you to make the right decisions to optimize your production process.

Ideal Finish Analysis is updated frequently to keep up with the latest developments in the coating and corrosion prevention industry and to comply with new operating systems like Windows 7 and Windows 8. The latest version of the software is available for free on our website http://www.tqcsheen.com

IDEAL FINISH ANALYSIS Ready
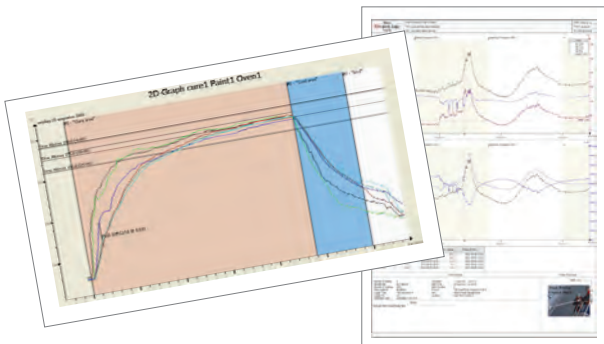

⭐ Features

Windows feel and look

Integrated context sensitive help

Easy user settings and download wizards

Advanced reporting functionality

20+ pre-defined calculation on results

Data export to Excel

Various graphs and statistics analysis

Extended's to Visual Basic for Applications

Advanced reporting in Word and Excel

Climate

DewCheck

Climate data

Dewpoint graph

⚙ Technical Specifications Ideal Finish Analysis Software

Probe type:	Thermo couple K
Supported :	Windows Vista, Windows 7,
	Windows 8 and
Operating Systems:	Windows 10
Platform:	32b or 64b
Memory:	32MB
Required Hard Disk space:	128 MB

⚙ Technical Specifications Supported Instruments

Cure:	CureView,
	Curve-X,
	CurveX-2,
	CurveX-2 USB,
	CurveX 3 Basic,
	CurveX 3 Standard,
	Elcometer 215/1 and
	Elcometer 215/2
Climate:	DewCheck 4 and
	Elcometer 319/2
Thickness:	Defelsko PosiTector 6000
Gloss:	SoloGloss,
	Duo Gloss,
	PolyGloss

The TQC Sheen Ideal Finish Analysis License Key is free of charge for everyone who purchased one of the Supported Instruments listed above at TQC Sheen or through one of TQC Sheen's distributors.

⦿ Tip

The temperature of the different areas of curing ovens can be separately adjusted. However, it is not easy to identify whether the temperature of the product itself and the exposure time will produce the desired results. In the case of powder coatings, if the curing time is too short or the temperature too low, the coating will not crosslink properly. Other results include orange peel and a lack of adhesion, because the powder crystals have not fused effectively. In the case of paints, under baking leads to poor distribution and cross-linking. Over baking can cause unwanted flow and lack of adhesion or even the disintegration of the coating.
