工作原理 / WORKING PRINCIPLE

一次性细胞培养袋安装在摇摆式生物反应器的摇摆平台上，培养袋充气后进行使用。培养基和细胞通过培养袋的管路被输送到一次性细胞培养袋中。摇摆平台中的电机运动，使得细胞培养液产生波浪式摇摆，从而实现有效的气体传输和混合。根据不同的细胞类型和培养条件对摇摆平台的运动速度和角度进行调整。

The single-use cell culture bag is mounted on a rocking platform of the Wave Bioreactor and inflated for use. The culture medium and cells are delivered to the single-use cell culture bag through its tubing. The motor movement in the rocking platform causes the cell culture fluid to produce a wavy rocking motion, thus achieving efficient gas transport and mixing. The motion speed and angle of the rocking platform are adjusted according to different cell types and culture conditions.
