

GABI Star

Agilent Technologies

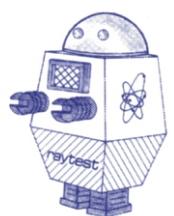

Channel Partner

Gamma

Radioactivity

Monitor

for HPLC and GC

RADIO-DETECTION

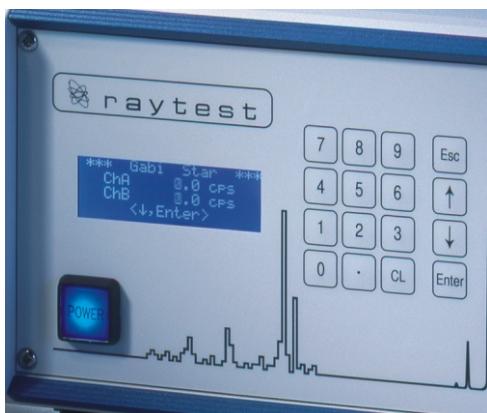

EXCELLENT LINEARITY

HIGHEST SENSITIVITY

Stand-alone operation mode

- Data transfer of radioactive intensity information to any HPLC system using analog output voltage (1V)
- No PC required
- Instrument control with built-in keyboard / display
- Parameter and spectrum printout on serial thermo printer

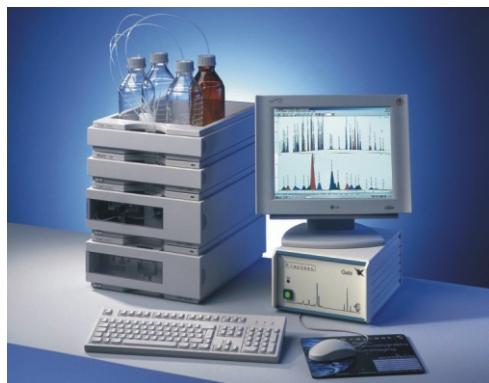

Instrument handling via integrated keyboard/display

Control of:

- Measurement channel selection
- Discriminator thresholds
- Energy calibration
- Spectrum scan
- Smoothing
- Background subtraction
- Analog output range

Remote-control operation

- Full control of GABI Star and entire HPLC system by GINA Star software
- Digital Data acquisition according to GLP

Application

GABI Star is a radioactivity flow-through detector for gamma, positron and high beta radiation. GABI Star controls up to two different scintillation detectors of various types, dimensions and shapes of the scintillation crystal to optimize the performance for all applications, e.g.:

- Gamma & Positron HPLC, GC and CE
- Radioactivity flow through monitoring
- Process control
- Waste effluent monitoring
- Detection of byproducts of radioactively labelled compounds
- Single sample counting
- Total activity counting
- RIA counting
- Isotope dilution studies
- Food contamination studies

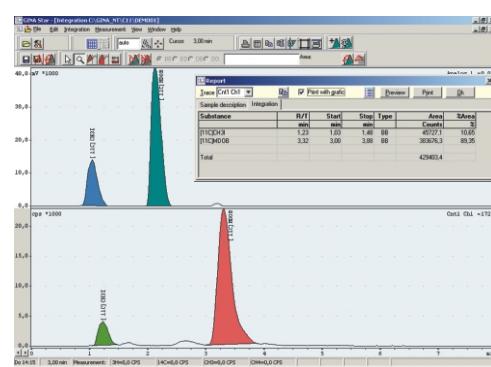

1x1 inch standard detector

- 1x1 inch Na(Tl) crystal
- Recommended energy range 10-150 keV
- Lead shielding with 10 or 30 mm wall thickness

2x2 inch standard detector

- 2x2 inch Na(Tl) crystal
- Recommended energy range 100-600 keV (high activity)
- Lead shielding with 50 mm wall thickness

Radio-HPLC-Chromatogram of [11C] MDOB and by products

OPTIMAL RESOLUTION

WIDE DYNAMIC RANGE

FAST OPERATION

2x2 inch pin hole detector.

- 2x2 inch Na(Tl) crystal with pinhole
- Recommended energy range 100-600 keV
- Lead shielding with 50 mm wall

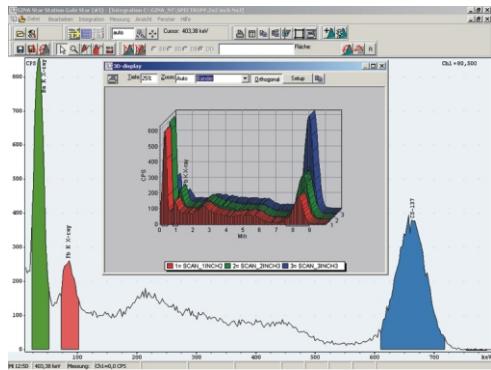

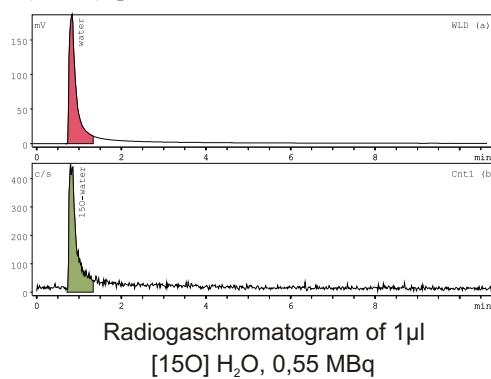

2x2 inch GC detector

- 2x2 inch Na(Tl) standard crystal
- Optimized for GC connection
- Temperature control for capillary heating up to 150°C

Integration c:\gina_nt\15-0\WATER

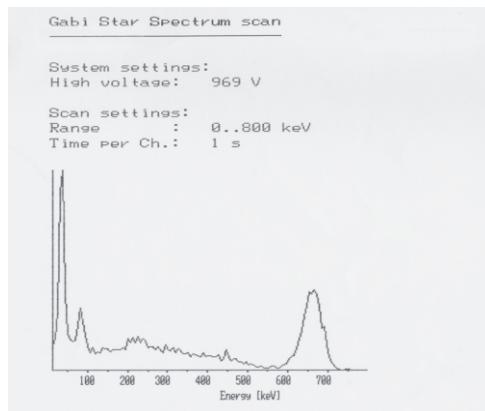

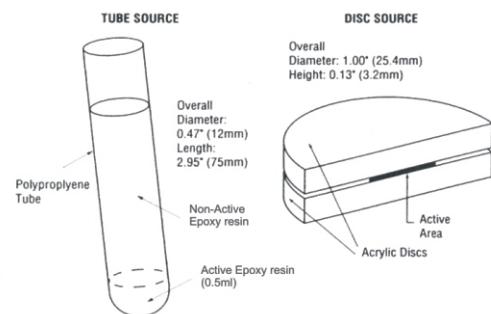

Spectrum scan with GINA Star

- 3-dimensional view
- Variable scan parameters

Cs-137 Tube / disc test source

- For energy calibration
- Performance test for regulatory requirements

Spectrum scan

- In stand-alone and remote controlled mode
- Built-in energy calibration and high voltage scan for system setup
- Selectable scan range

Modular design

- CE, EMV approved
- Clearly arranged connectors
- Exchangeable plug-in boards for easy maintenance

Technical Data

Power supply	110 V -120 V / 60 Hz or 230 V -240 V / 50 Hz ± 10 %	
Power consumption	40 VA	
Dimensions (W : H : D)	250 x 160 x 320 mm (without detector)	
Weight	5 kg (without detector)	
Operating temperature	10°C to 40°C	
Humidity	max. 70 % relative humidity	
Count rate	up to 200 000 cps	
HV range	500 – 2000 V programmable	
Energy range	30 – 1600 keV	
Background	1"x 1" Nal (TI) crystal	50 cpm
	2"x 2" Nal (TI) crystal	30 cpm
Efficiency	1"x 1" Standard Nal(TI)	¹²⁹ I max. 10 %,
	1"x 1" Through hole Nal(TI)	¹²⁹ I max. 55 %,
Data output	RS232 interface 2 analog output channels range 0-1 V (overflow 150%) resolution 20 bit on external display	
Data input	7 analog input channels range (-0.5 V to + 4.5 V), resolution 21 bit	
Control signals	TTL signals for:	liquid scintillator pump external Start/Stop measurement wait / active
	Relay contacts:	4 (programmable) fraction collector waste collector
	HPLC pumps:	3 x voltage control or 3 x frequency control

Ramona Star

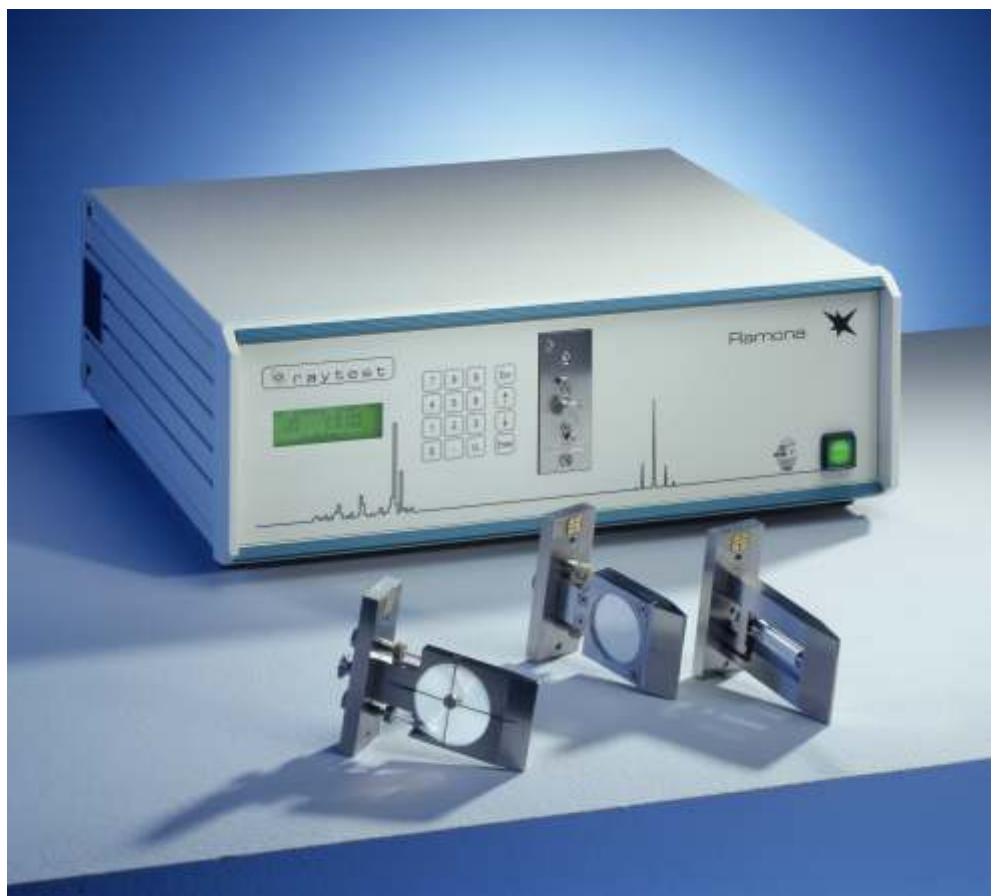

Beta (Gamma)

Radioactivity

Flow Monitor

Analyser

MAXIMUM SENSITIVITY

HIGHEST RESOLUTION

LOWEST BACKGROUND

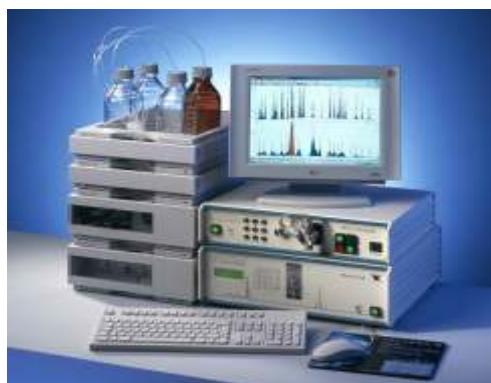

Stand alone operation mode

- Data transfer of radioactive intensity information to HPLC system using analog voltage output (1V).
- No PC required.
- Instrument control by using build in keyboard / display.

Remote controlled operation

- Ramona Star and other HPLC equipment is controlled by Gina Star software.
- Digital Data acquisition according to GLP Full control of Ramona Star and complete HPLC system

Instrument handling via integrated keyboard/display

- 4 lines, 20 characters LCD
- 16 button keypad
- Parameter dialog

Liquid scintillator admixture pump

- Sapphire piston pump
- Rubin valves
- Pressure up to 1000 psi
- Flow rate: 0,2-10 ml/min
- Manual/automatic control
- 3 fixed splitters (option)

Cells for LS application

- Liquid flow scintillators
- Cell volumes 10-2500µl
- Pressure tight up to 15 bar

Cerenkov flow cell

- Cell volumes 10-1300µl
- Pressure tight up to 15 bar

External solid scintillator cells

- BGO crystal for 125-J, 99m-Tc, PET
- Plastic scintillator for 32-P

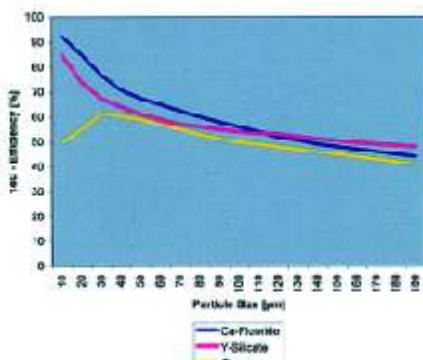

RADIOCHEMICAL PURITY

METABOLISM

PHARMACOKINETIC

Quartz tube solid scintillator flow cell.

- all types of solid scintillators.
- Particle size 5-150µm
- Cell volumes 5-370µl
- Pressure tight up to 150 bar
(special version up to 450 bar)
- Flow rate up to 20ml/min

Efficiency 14-C

- Highest efficiency up to 90%
- Depending on particle size

Automatic cell identification

- All cell parameters stored on cell EEPROM.
- Cell parameters are transferred to evaluation software according to GLP. Automatic coincidence time setting depended upon used scintillator

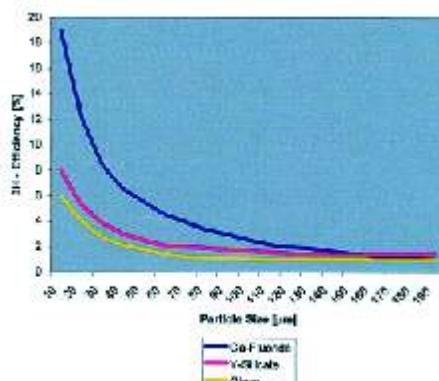

Choice of solid scintillator

- Lithium glass
- Lithium glass, coated
- Calcium fluoride
- Yttrium

Cells for micro HPLC application

Standard cell for GLP

- Solid 14-C source
- Plastic scintillator

Efficiency 3-H

- Highest efficiency up to 20%
- Depending on particle size

Modular design

- CE, EMV approved
- Clearly arranged connectors
- Exchangeable plug in boards

Technical Data

- radio flow detector with 2" PMTs, special measuring chamber design to provide best sensitivity and resolution.
- 2channel amplitude discriminator.
- 7-analog inputs (21 bit resolution) for external detectors (UV-Detector etc.).
- 2-Analog outputs for radioactivity information with 20 bit resolution for connection and integration into an existing HPLC system.
- Independent output range for both analog outputs.
- HPLC pump control for 3 pump channels.
- Liquid Scintillator pump control. (start, stop, scintillator flow)
- Fraction collector control with. waste management function.
- Start / Stop inputs.
- Measurement status signals to trigger external hardware (auto sampler etc.).
- Cell identification and parameters stored in cell EEPROM.
- Automatic background subtraction.
- RS-232 Interface t.o connect to Gina Star HPLC control software

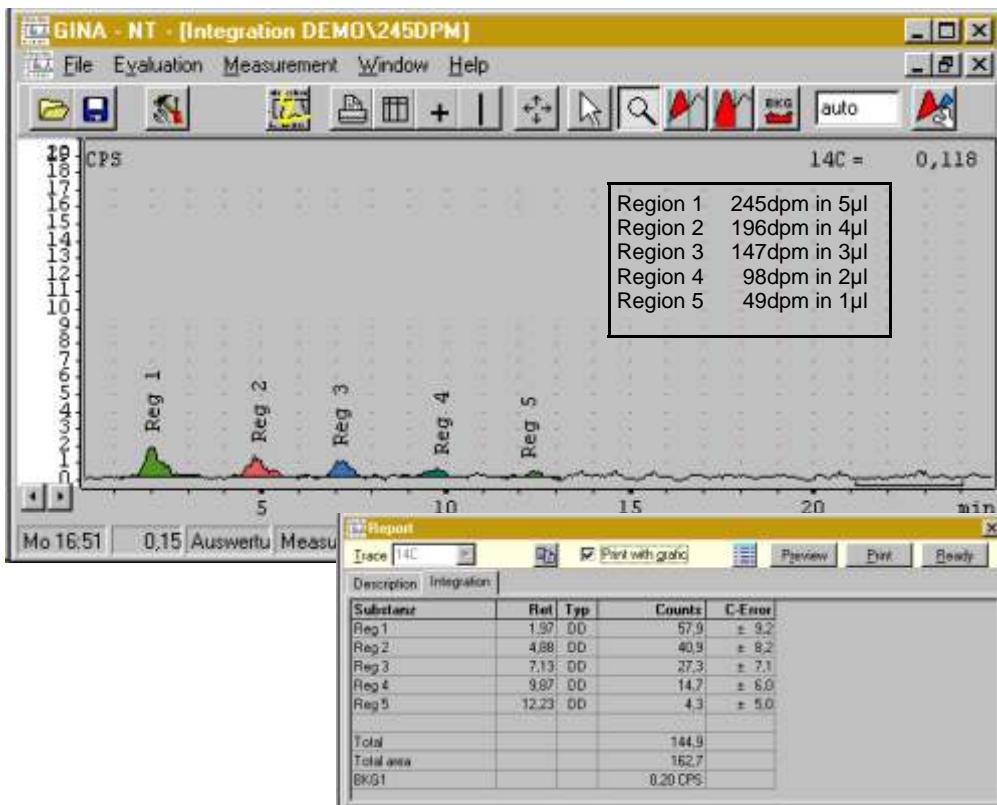

Ramona history

- First delivered in 1983

Generations:

- 1983 Ramona D, A,
 - 1985 Ramona 4 and 6
 - 1988 Ramona 5, 5LS
 - 1990 Ramona 90,92, classic
 - 1998 Ramona 2000
 - 2000 Ramona Star
- Total production over 2000 units.
Oldest in use for over 17 Years.

Detection Limit

Remote controlled operation

Gina Star software

- Digital Data acquisition
- Control of all parameters.
- GLP compliant data handling.
- Calculation of counting error and detection limit (see graphics).
- Comfortable graphical user interface.
